Logotype Fortemix

1 Logotype Fortemix

1.1 Basic variants of logotypes

The main element of a uniform visual style is a logo. It consists of two parts - a graphic symbol with Fortemix inscription on a diagonal, a red-white box and the text "Fortemix". The basic rendering of the logotype color in predefined colors is applied to all printed color materials.

Basic variant, 2 colors

Separate symbol, 2 colors

1 Logotype Fortemix

1.2 Monochrome variants

The monochromatic (one-color) pattern of the logotype is usually white and black. We prefer company colors in accordance with the graphic handbook.

With regard to the use of a logotype for various material applications and colored substrates, it is recommended to maintain a color contrast. For non-standard applications (extrusion, laser engraving, milling, drilling, etc.) in which contrast is not possible, sufficient material contrast should be maintained and technological applications should be avoided.

Custom hues and shades of material lie within the competence of graphic graphics.

Basic monochrome variants, 2 colors

Logotype ⊕ M

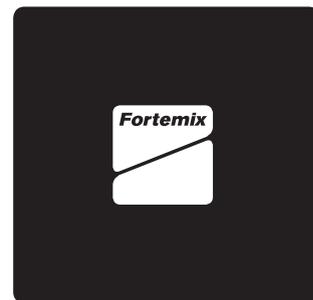

Logotype ⊖ M

Symbol ⊕

Symbol ⊖

1.3 Logotype protection zone

The protection zone defines the area of the logotype / logotype that surrounds text or graphic elements. The protection zone helps to maintain consistency, possibilities and good readability in relation to other graphic elements. An exception to this rule are photographs that do not make it clear in terms of color, texture or excessive contrast (see the chapter 'Unacceptable variants').

Suggested logotype protection zone

– is defined by the X module, which is defined by the size of the graphic symbol.

The minimal logotype protection zone

– is defined by 1/2 of the X module.

⚠ Using the minimum zone protection limits the readability of Fortemix.

1 Logotype Fortemix

1.4 Use of color

The basic color of the logotype in predefined colors for use in color materials enabling the printing in full color or monochrome

1.7 Logo in the background

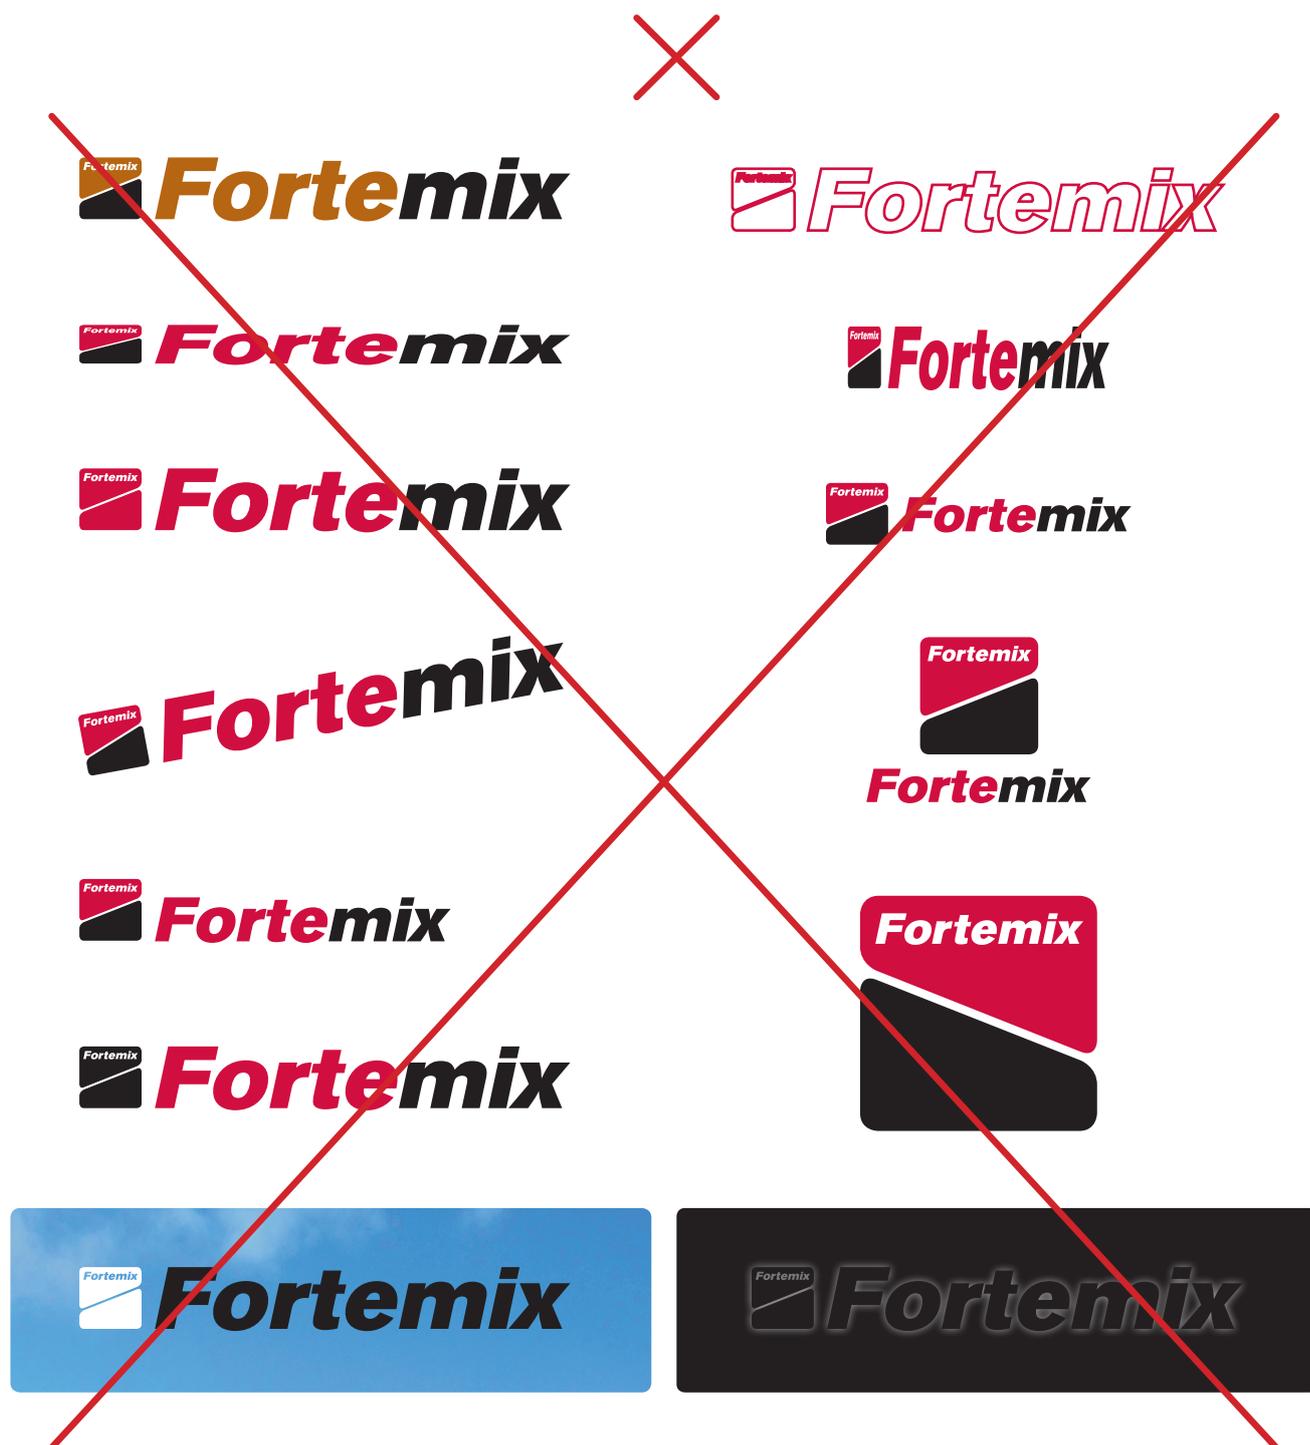

If the use of the logotype on the packaging of the product or product requires placing it on colored substrates in basic or unspecified colors, gradients or photographs, only monochromatic positive or negative variants in white or black are allowed. The exception is the use of full-color versions of the logotype on the first corporate graphics and black and white photos without contrast. When using the image against the background of the logotype, observe the maximum degree of homogeneity of the grid and choose a positive / negative monochrome variant with respect to sufficient color contrast.

1.8 Unacceptable variants

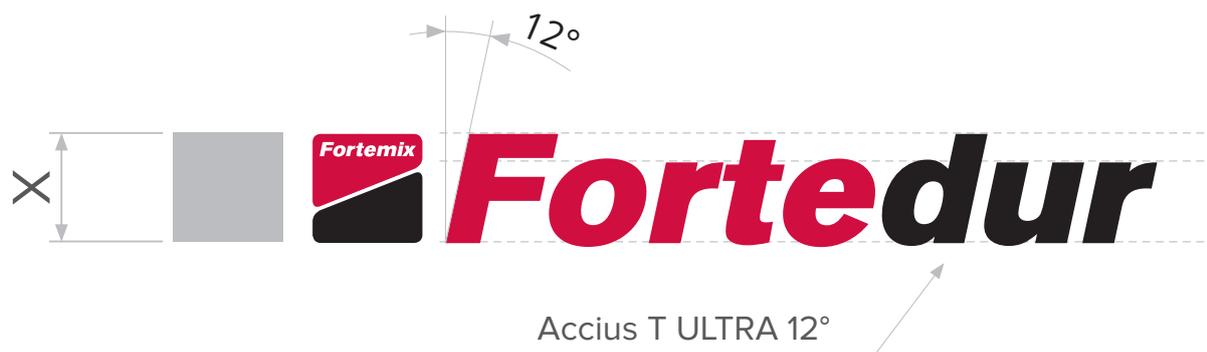

When using the logotype and logotype are not allowed: proportional deformation, twisting *, mirror image, logotype with other graphic elements such as contour lines, shadows, effects, etc., which can be manually changed using a specific color scheme (to the mentioned exceptions) on documents that make reading difficult. It is also forbidden to change the position of the symbol in the logotype.

* The logo can be rotated only when the rotation is consistent with the arrangement of the entire compositional unit (vertical flags, natural skew of the car body, etc.). The rotation must then be compatible with the rotation of the surrounding elements.

2.1 Proportional and typographic relations

The Fortemix product line distinguishes Fortemix subgroups. The name of the product line is written in Accius T in the ULTRA slot by 12°. The basic pattern is common to part of the Fortemix logo and product line name.

2.2 Unacceptable variants of color

A color rendering in the logotype and product lines is derived from the basic variants from the Fortemix line. Only the prefix “Forte” or “For” is displayed in red. The following mark can be any Fortemix color or a specific color of the product line.

⚠ A with the exception of product lines **Fortelock** and **Fortelock DECOR**, Chapters 4 and 7.

 Fortedur	 CMYK: 100/72/0/18
